This will be the URL of your website (your subdomain)

After entering your data, click here

The following webpage will be displayed:
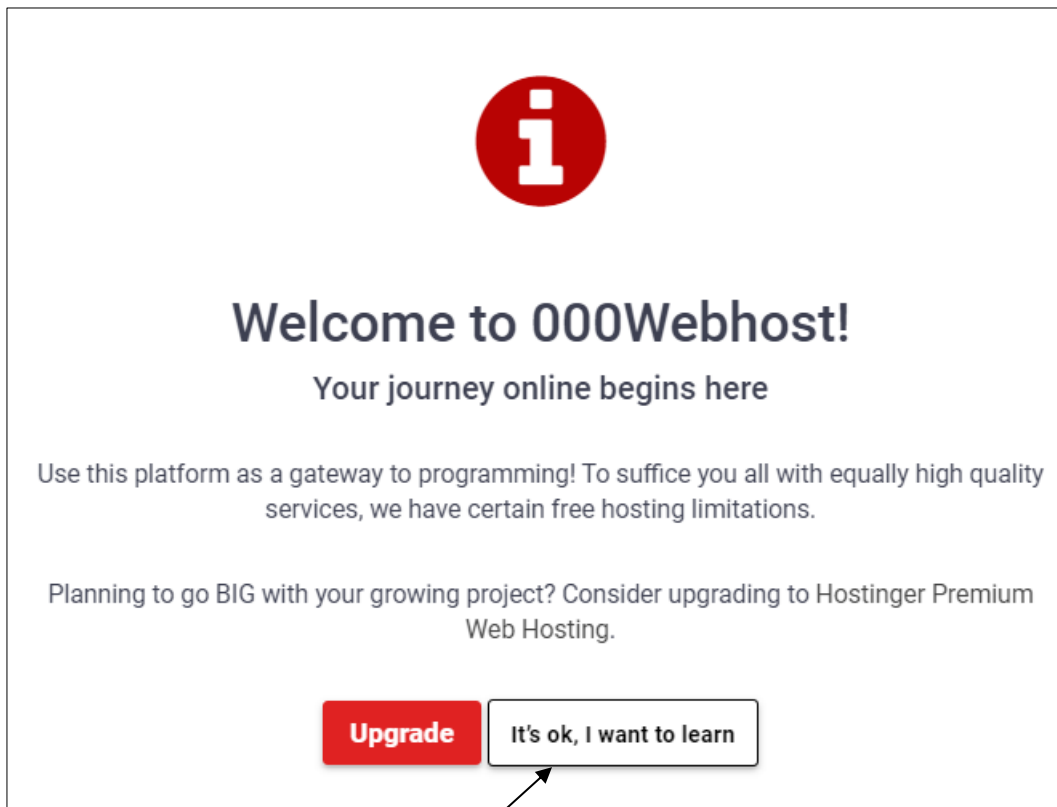

Click here
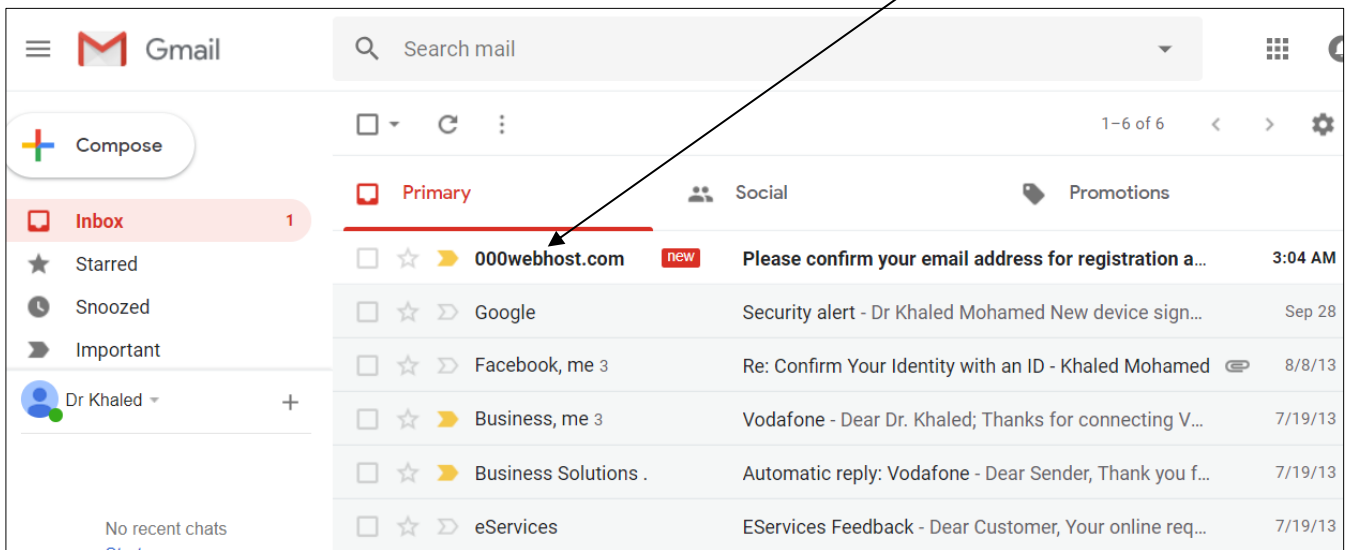

The following webpage will be displayed:

**Click here**

The following dialog box will be displayed:

Email confirmation required

Please confirm your email to fully access your website. Check your email inbox as well as spam section for confirmation letter and click on link in it to confirm your account.

CANCEL   OK
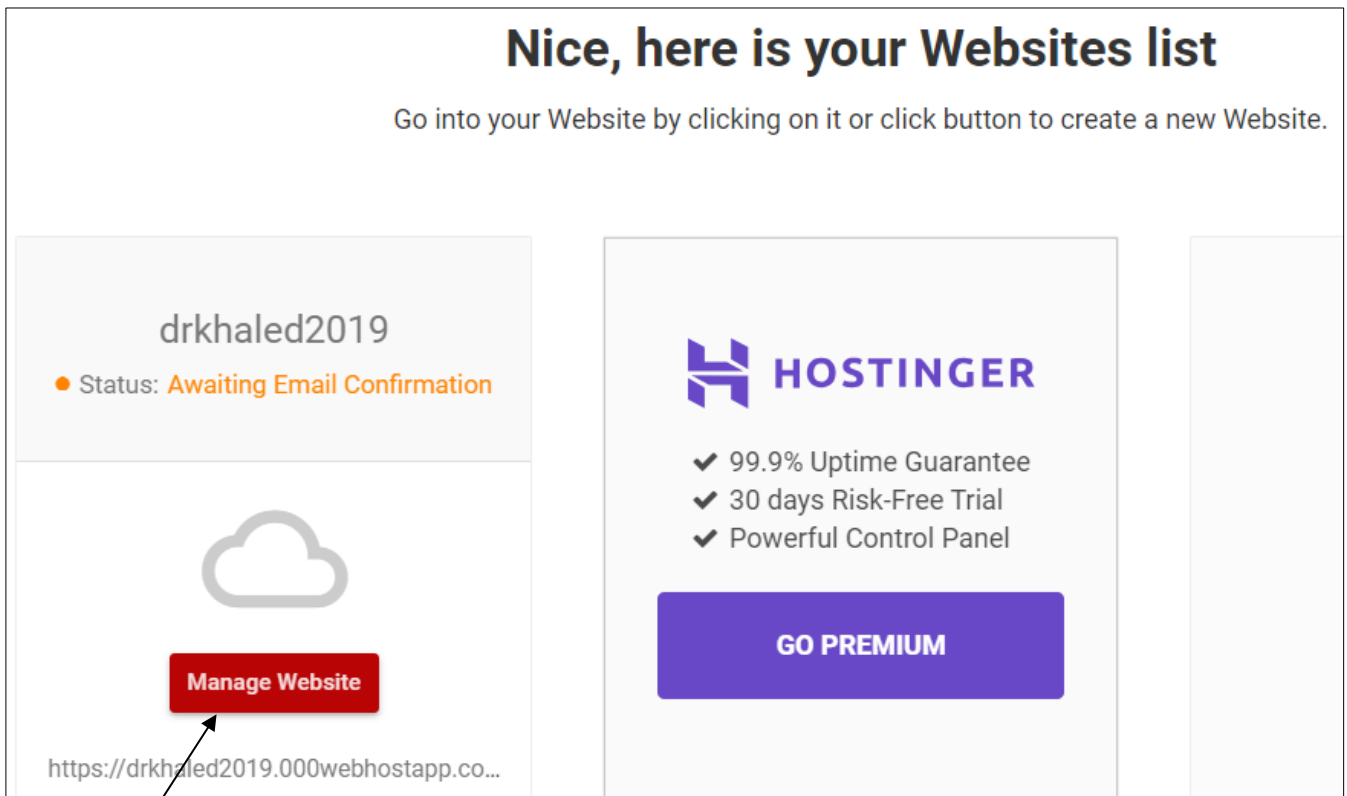

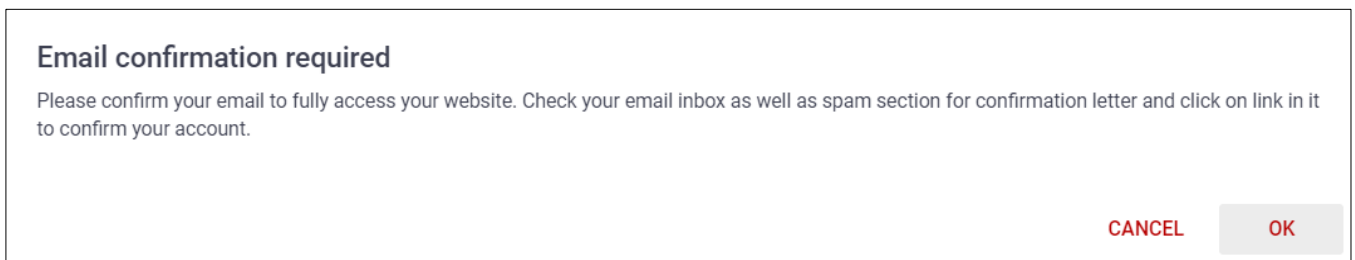

Click **OK**

Open your email, you will find an email sent from "000webhost.com"

(If you did NOT find it Inbox, you may find it in Junk/Spam)

Open the new email
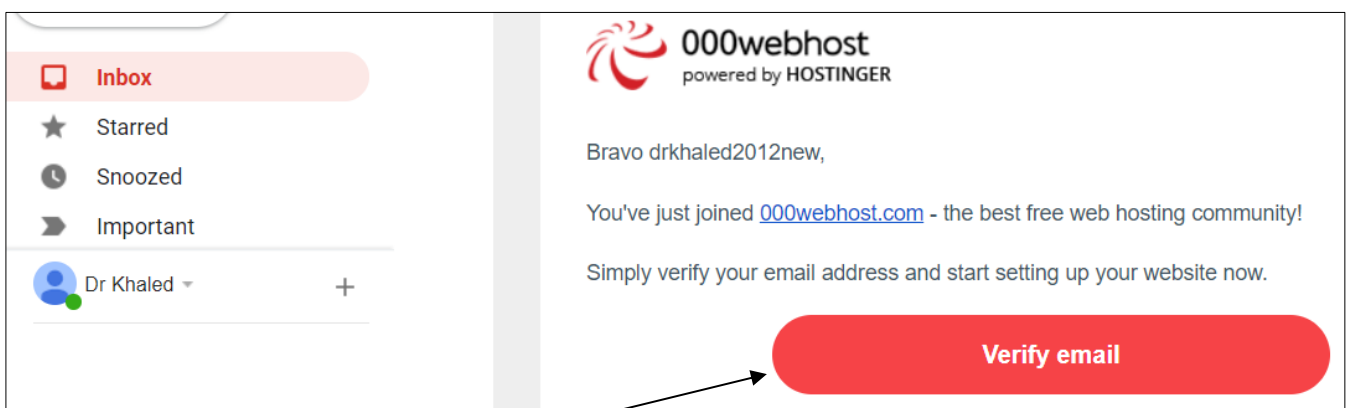

Click **"Verify email"**

The following webpage will be displayed:

Once your email is verified, you can start using your subdomain

3 Accessing your 000webhost-subdomain using the File Manager of 000webhost

3.1 Opening the File Manager of 000webhost
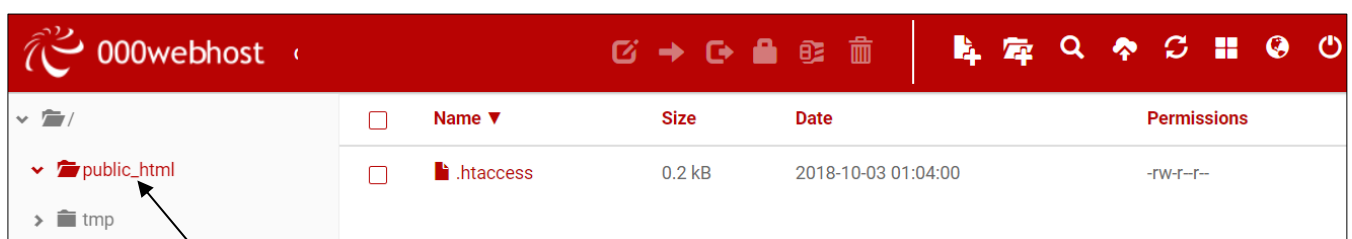

3.1.1 Opening the File Manager directly

Open the following webpage:

https://files.000webhost.com/

Enter your website name (mentioned in page3, which must be your full Id-number) and your password then click login
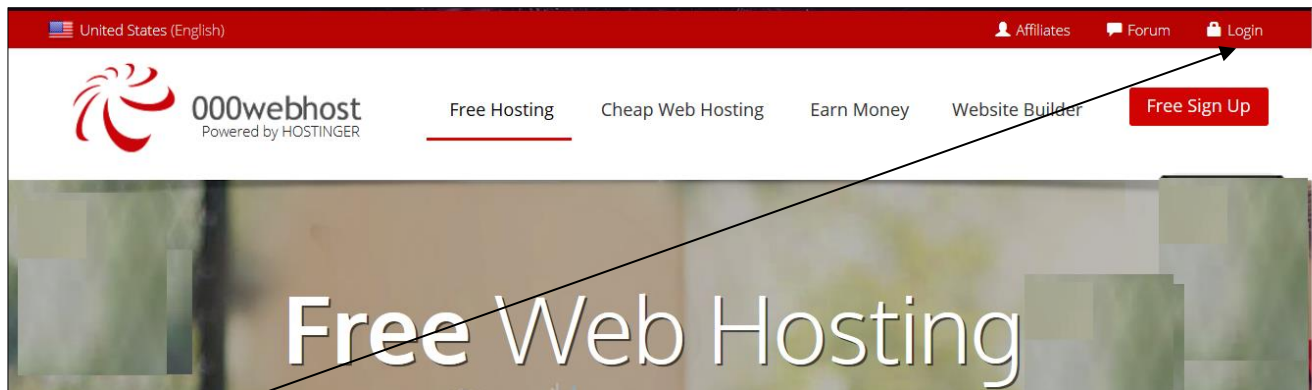

The following webpage will be displayed:

Note that **public_html** is the active folder, this is the folder in which you will create/upload the files of your domain.

3.1.2 Opening the File Manager using the main page
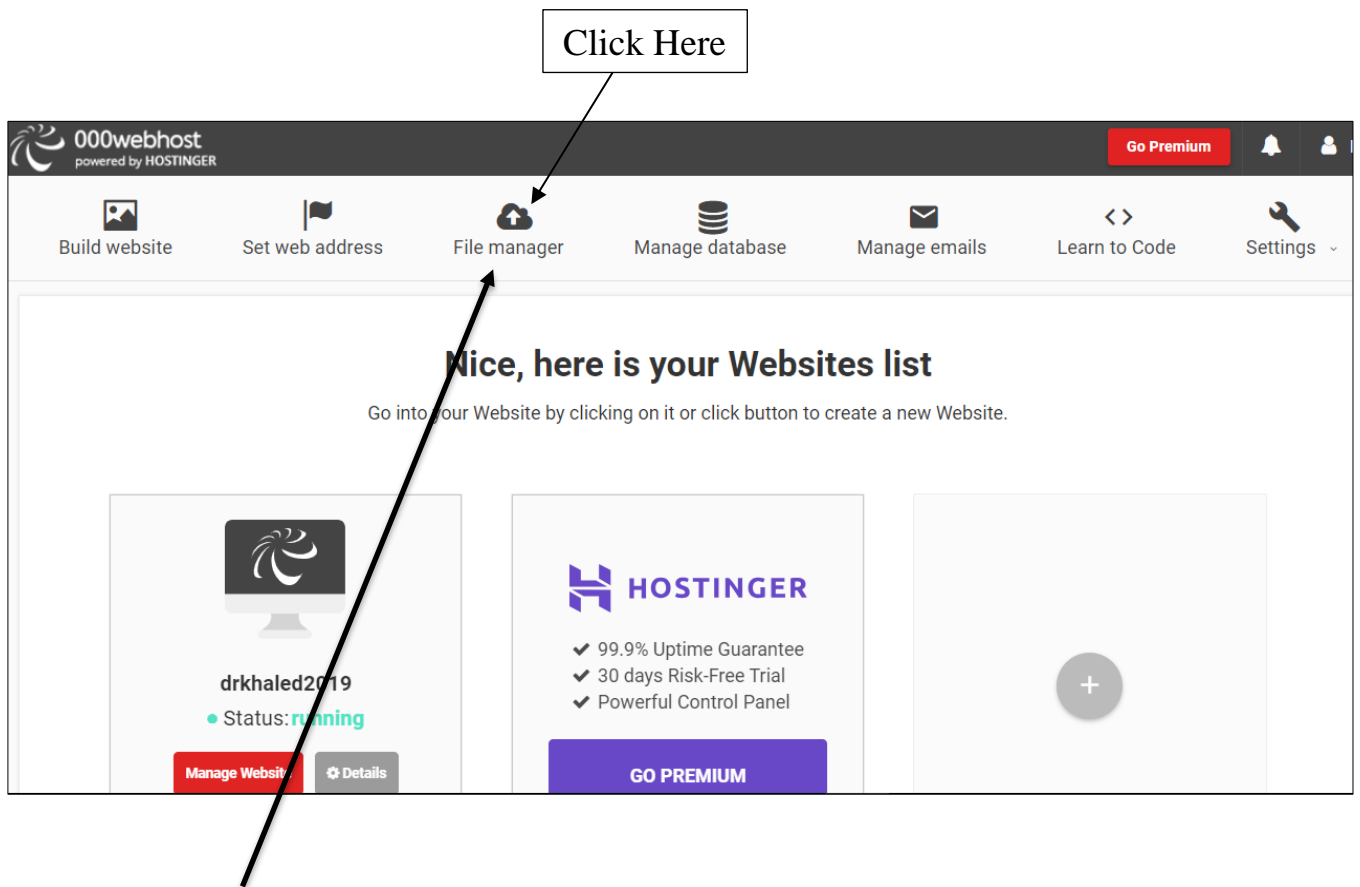

Open 000webhost webpage: https://www.000webhost.com/

Click **Login**

The following webpage will be displayed

Enter you email address and your password then click **LOG IN**

The following webpage will be displayed:
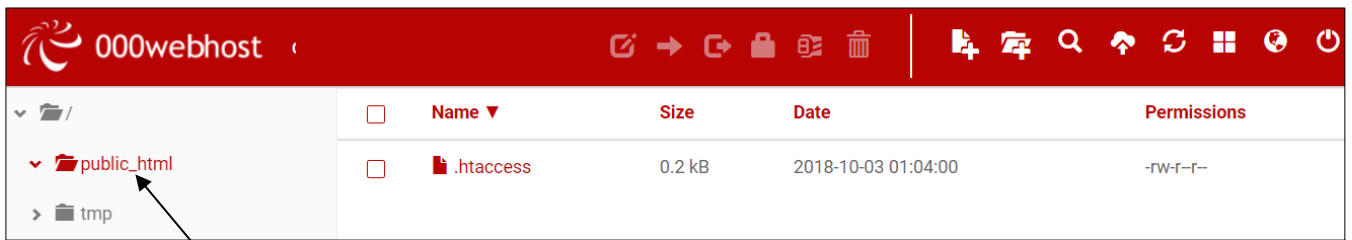

Click Here

Click **File Manager**

Scroll down the page until you reach the following part:

Click **Upload files now**
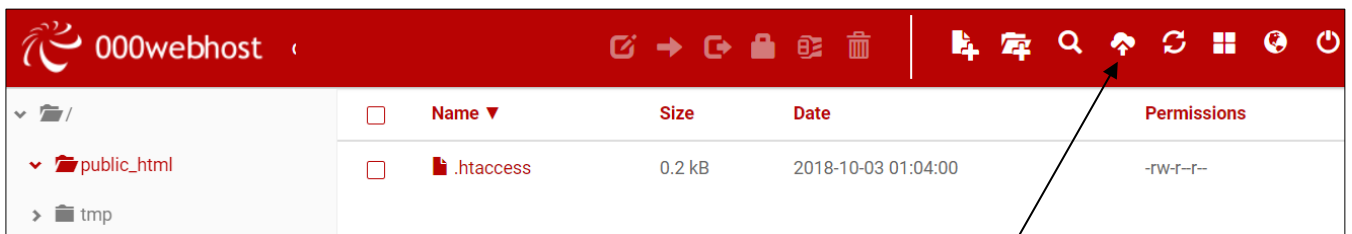

The following webpage will be displayed:

Note that **public_html** is the active folder, this is the folder in which you will create/upload the files of your domain.

There are two main methods for dealing with files in your subdomain:

1. Creating files at your local machine then uploading them to your subdomain
2. Creating files online at your subdomain

3.2 Creating files at your local machine then uploading them to your domain

Assume that you created your file(s) at your local machine, and you want to upload them to your domain.

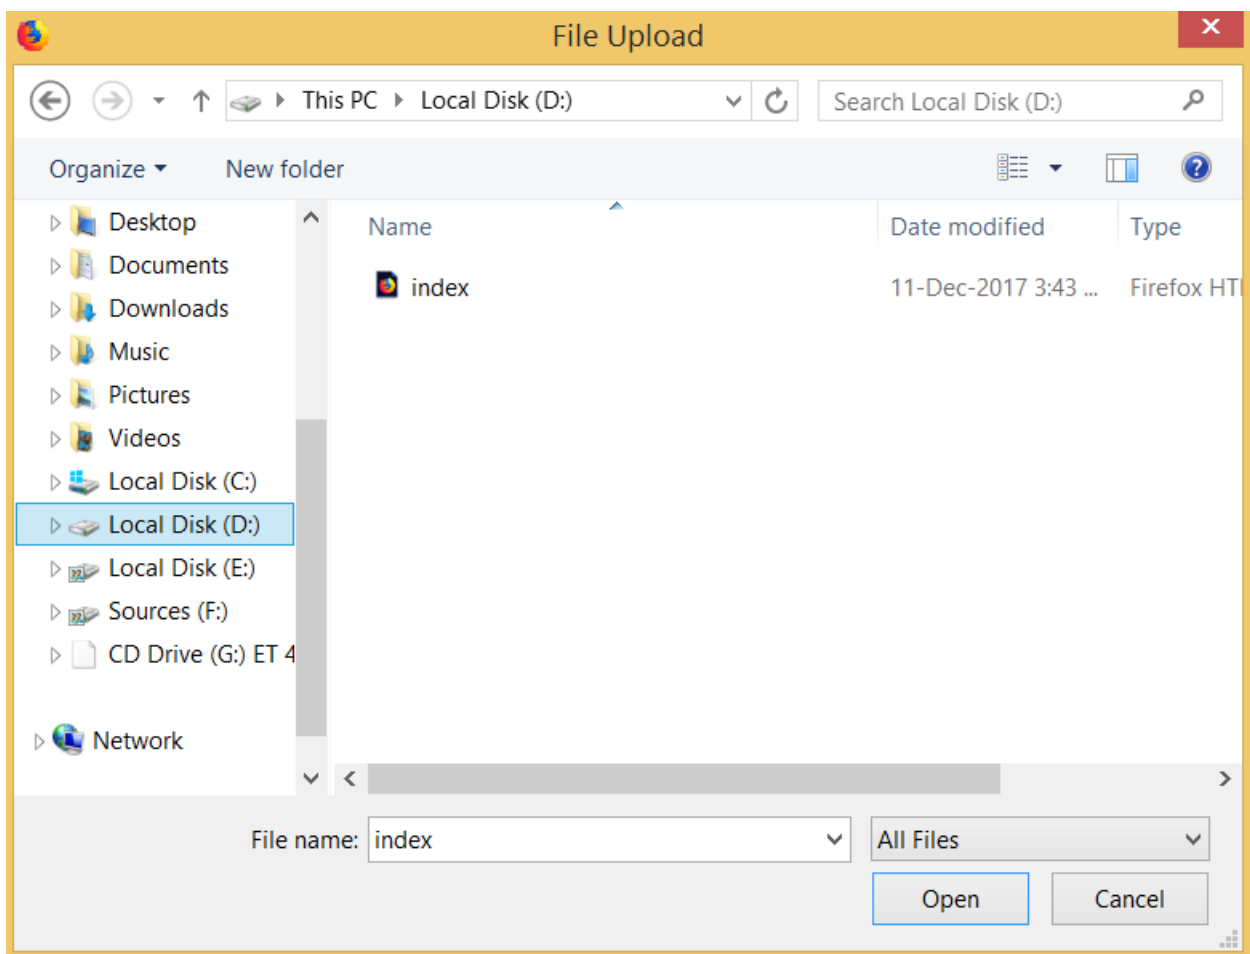

To start uploading file(s) to your domain, click the Upload icon

The following dialog box will be displayed:

Click **SELECT FILES**

The following dialog box will be displayed:

Select the file(s) you want to upload then click Open
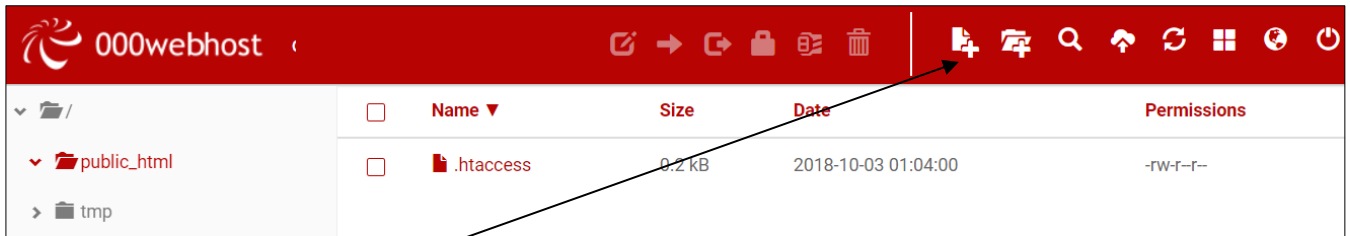

The file(s) you selected will appear, click **UPLOAD**

Important Note

After uploading the file "index.html"

Please do NOT forget to upload the image that will appear in your webpage

3.3 Creating files online

You can create file(s) directly on your subdomain:

Click **New File** icon
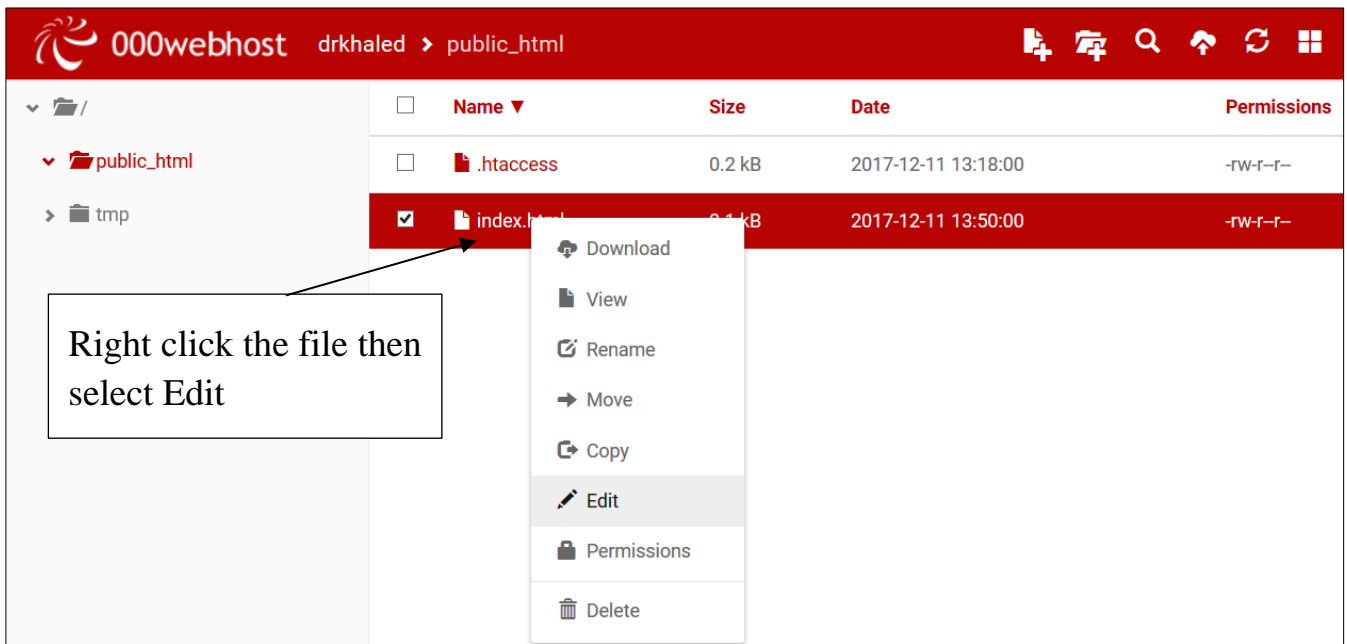

The following dialog box will be displayed:

Specify the File name (with its extension)

Click **CREATE**

An empty file will be created as shown below:

Right click the file then select Edit

The following webpage will be displayed:
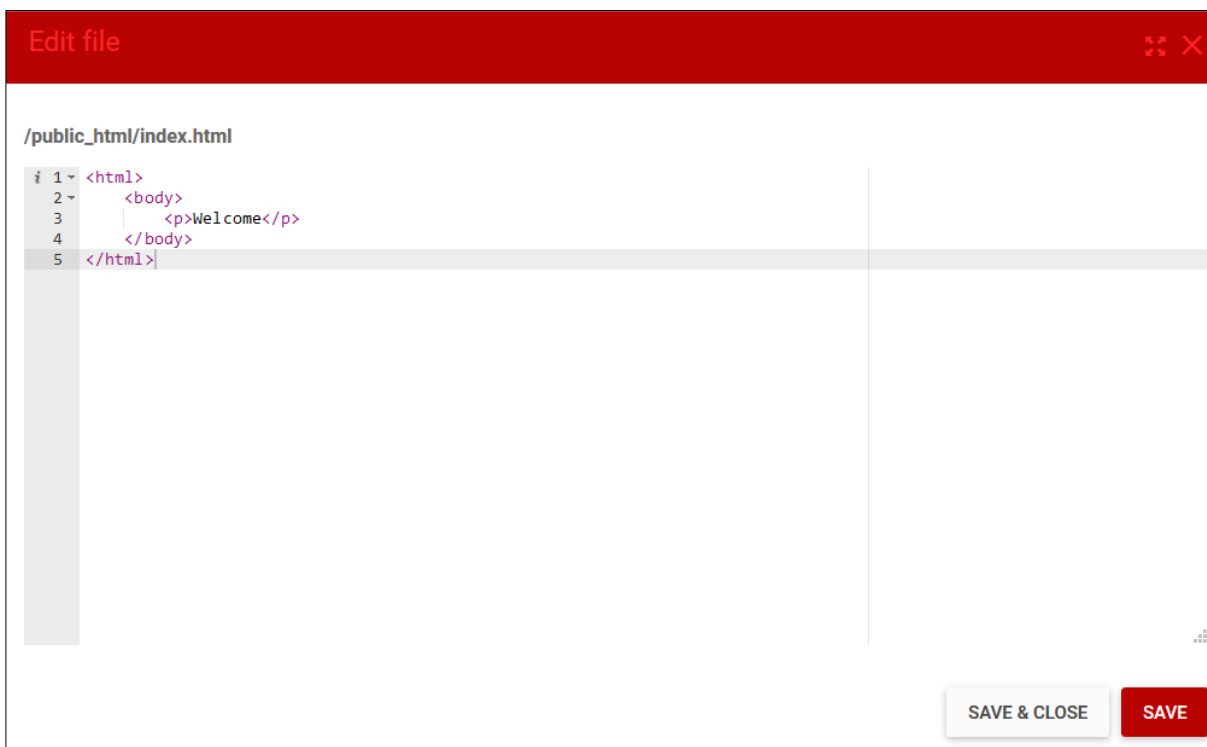

Initially, the file will be empty, edit the file (write your code) then click **SAVE** or "**SAVE & CLOSE**"

Note that *index.html* is the homepage of your website.

> **Notes**
> - In 000webhost, the homepage of your website must be called ***"index.html"***.
> - In other servers, the homepage of your website may be called ***"index.php"***, ***"default.html"***, ***"default.php"*** … etc.
> - You should ask customer-support about the name of the homepage unless this information was already sent to you.

You can open your website by right clicking the file **"index.html"** then clicking View as shown below:
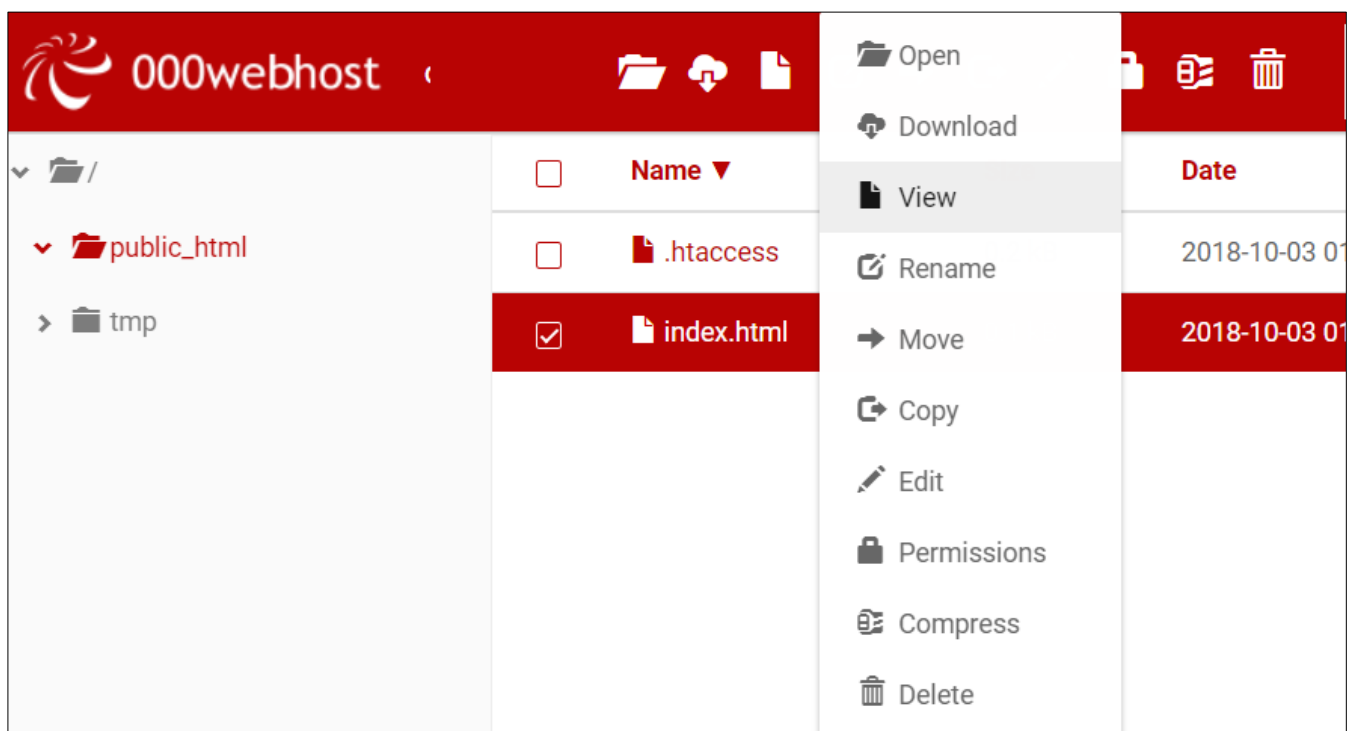

The homepage of your website and hence your website will be opened as shown below:

Note

You cab open your website at any time using its URL, say ***20131456276.000webapps.com***
